

TC nr 1	5.06.2022
Priority: high	
Function: Recognition of license plates	
Description: The system opens the gates when a car that has paid for parking arrives. The system reads license plates.	
Preconditions: The user has a card (purchased subscription) or legible registration plates. The administrator has cameras that read registrations and a parking system.	
Steps/Test data:	Expected result:
Bring license plate A close to the camera several times (parking fee paid).	The gates open every time.
Bring license plate B close to the camera several times (parking fee paid).	The gates open every time.
Bring license plate C close to the camera several times (parking fee not paid).	The gates do not open. The system enables payment at the gate.
Exit conditions: The system reads paid or unpaid license plates. On this basis, it decides whether to open the gates or enable payment.
